# Boards

- Combine drag-and-drop sprint planning with flexible work item tracking and comprehensive traceability to create the ideal home for all of your ideas, no matter how big or small they may be.

# Repos

- For TFVC, Azure provides unlimited private Git repository hosting and support that scales from a small hobby project to the world's largest repository. Establishing pipelines requires the use of a properly formatted repository.

# Pipeline

- Pipelines allows you to automate your builds and deployments, allowing you to spend less time worrying about the nuts and bolts and more time being creative.

The screenshot displays the Azure DevOps web interface. The left sidebar shows the navigation menu with 'Builds' selected. The main area shows a pipeline run for the project 'AdventureWorks Mobile' with the build number '10382'. The pipeline is titled 'Enabling feature flags for Preview Attachment and Grid Views' and is currently running. The 'Linux Job' is highlighted, showing its status as 'Running' and duration as '3m 29s'. The 'Linux Job' details are expanded, showing a list of steps: 'Prepare job', 'Initialize job', 'Get sources', 'Cmdline', 'Nodetool', and 'Install dependencies'. The 'Install dependencies' step is currently running, showing the command 'yarn install v1.7.0' and the output of the command, including the resolution of packages, fetching packages, linking dependencies, and building fresh packages.

Summary Logs Tests YAML

Windows Job Running 1m 53s

Linux Job Running 3m 29s

macOS Job Running 3m 07s

Linux Job

Agent: Hosted Linux

Started: Sep 5 at 11:12am 3m 29s

Step	Duration
Prepare job	< 1s
Initialize job	1s
Get sources	24s
Cmdline	28s
Nodetool	3s
Install dependencies	2m 31s

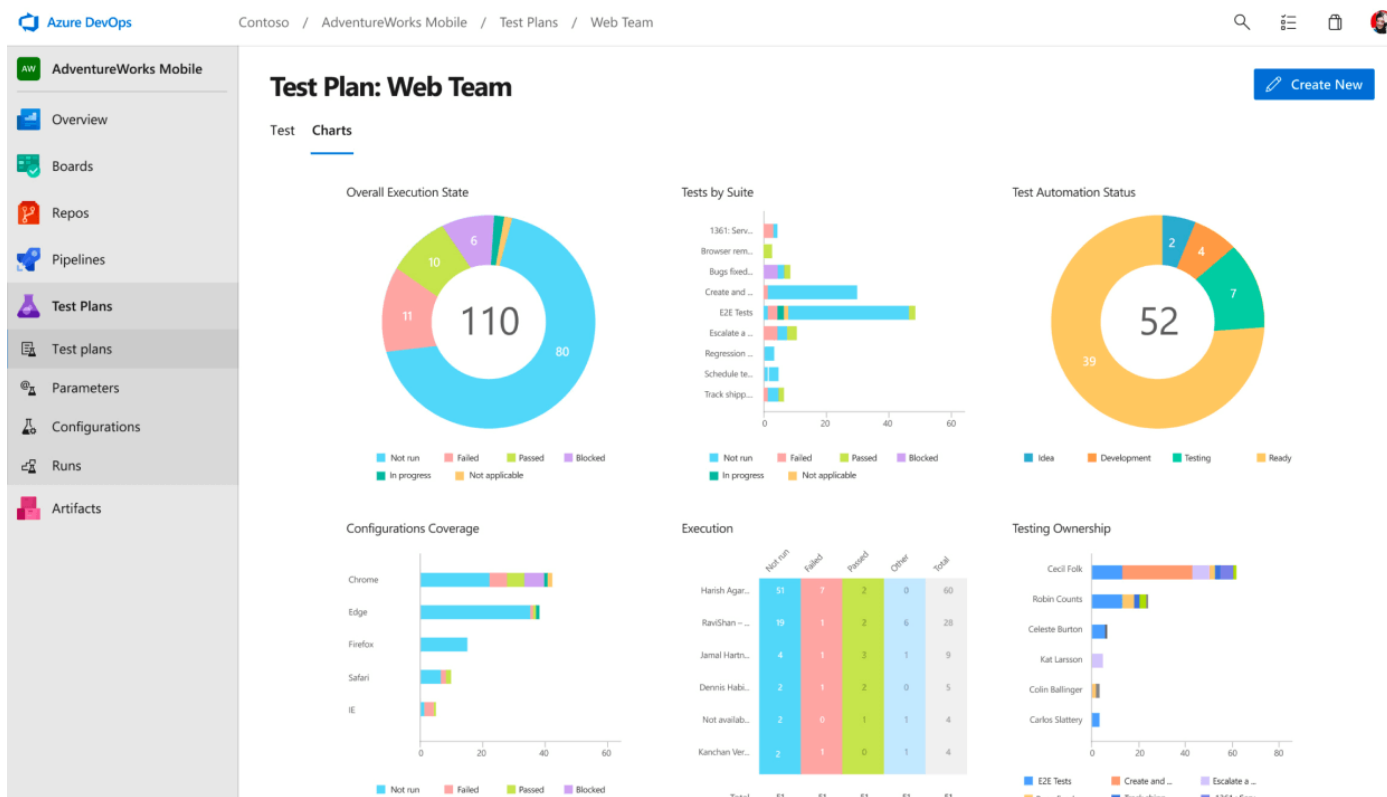

```
yarn install v1.7.0
$ node build/npm/preinstall.js
[1/4] Resolving packages...
[2/4] Fetching packages...
[3/4] Linking dependencies...
[4/4] Building fresh packages...
$ npm run compile
[#####-----] 152/243
> code-oss-dev-build@1.0.0 compile ./adventureworks/build
> tsc -p tsconfig.build.json

Done in 4.89s.
$ node ./postinstall
[##] 2/2removed './adventureworks/extensions/node_modules/typescript/lib/tsc.js'
removed './adventureworks/extensions/node_modules/typescript/lib/tsserverlibrary.d.ts'

removed './adventureworks/extensions/node_modules/typescript/lib/typescriptServices.d.ts'
removed './adventureworks/extensions/node_modules/typescript/lib/typescriptServices.js'
```

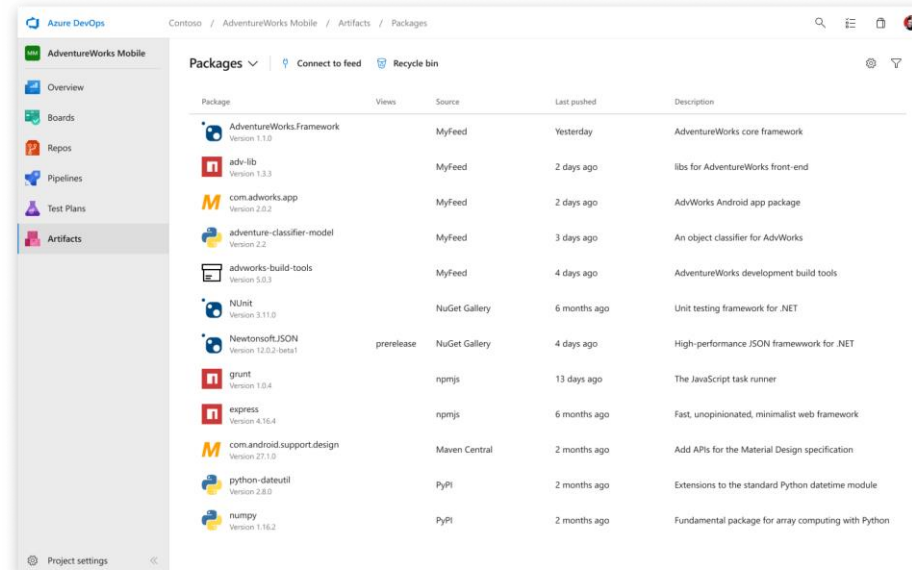

# Test plans

- Planned and exploratory testing services for your apps can help you improve the quality of your code.

# Artifacts

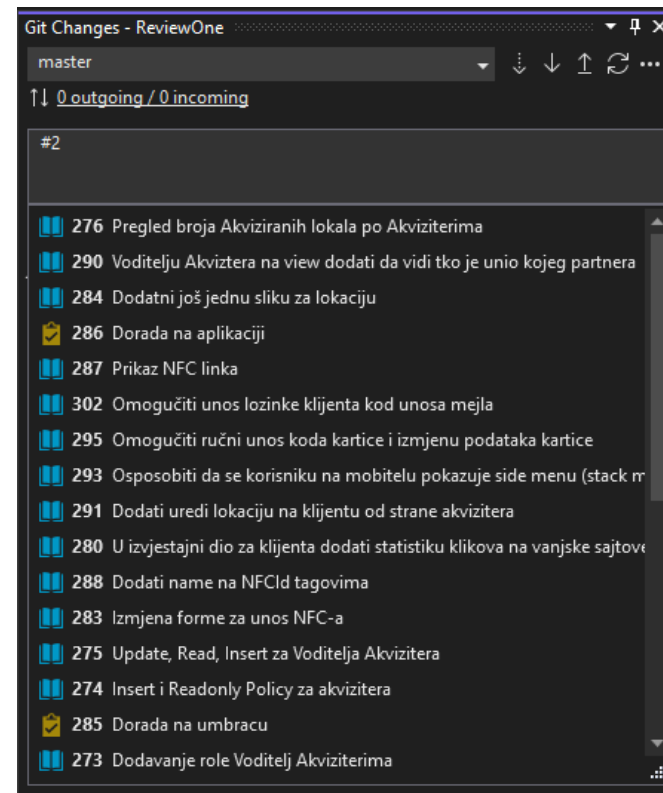

- You can easily integrate fully integrated package management into your continuous integration/continuous delivery (CI/CD). Create and distribute Maven, npm, NuGet, and Python package feeds derived from public and private sources to teams of any size using the npm package manager.
